Summer's in Full Swing — And We're Just Getting Started

With summer in full swing, July brings long days, cookouts, and busy AC units working to keep families cool. At Time Savers Heating & Cooling, we're proud to be the team you trust when temperatures rise.

Last month, we celebrated 20 years of serving our community. We're grateful for the support and stories from customers new and old. Our anniversary was a reminder that it's all about people, relationships, and earning your trust one job at a time.

This July, we remain focused on keeping you comfortable and supported. From mid-season tune-ups to emergency calls and community events, our team is ready and just a phone call away.

customer or new to us, know that honest service and genuine care for your home are at the heart of everything we do.

Here's to a safe, cool, and memorable July.

Highlights from June: Community & Comfort

June was a month full of community spirit and milestone celebrations. We took time to honor fathers on Father's Day and celebrated 20 years of trusted service to our community. Amid rising summer temperatures, our team prioritized emergency repairs to keep homes cool and comfortable when it mattered most.

Marking 20 Years of Service

This June, we reached an incredible milestone: 20 years serving our community with honest, dependable HVAC service. We were truly overwhelmed by the kind words, support, and stories shared by customers old and new. This anniversary was more than just a celebration—it was a reminder of why we do what we do. Building lasting relationships, showing up when it counts, and earning your trust, one job at a time, continues to be our mission every day.

Emergency Services in the Heat of Summer

As temperatures climbed in June, so did the demand for fast, reliable AC repairs, and our team was ready to answer the call! We know how crucial it is to stay cool during a heatwave, especially when a system suddenly fails. That's why we made emergency service our top priority, working quickly to restore comfort to homes without air conditioning. Whether it was late at night, on weekends, or during busy weekdays, Time Savers showed up with the expertise and professionalism our customers count on. We understand that emergencies don't wait for convenient hours, and we're committed to being there when it matters most, ensuring families stay safe and comfortable all summer long.

★★★★★ 3 days ago **NEW**

Great price

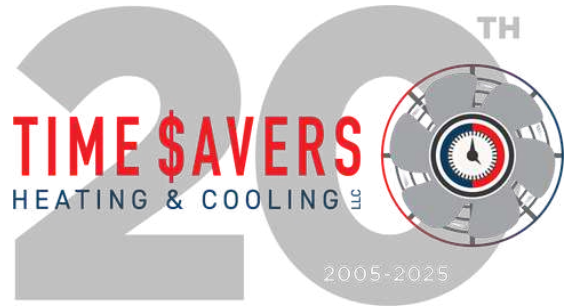

The Time Savers team is great to work with! Our AC stopped working on the 4th of July. Their team was super responsive and came out the same day, quickly fixed the issue, and provided their recommendations for maintaining it moving forward. We'll definitely be using them for any HVAC needs in the future!

★★★★★ a month ago

From the first estimate to the finished installation, Doug and his team was courteous, professional and thorough. The new furnace & AC are working flawlessly. With the new ecobee thermostat we are able to adjust the temperature before returning from vacation. The process couldn't have been easier.

★★★★★ 4 days ago **NEW**

AC went down in middle of the summer. Called on a Sunday and Seth was out to repair within an hour of calling. Great service, explained everything, very friendly and definitely recommend.

July HVAC Tip: Give Your Outdoor Unit Some Breathing Room

As your air conditioner works overtime during the hottest days of summer, it's crucial to make sure your outdoor unit can "breathe" properly. A common issue we see in July is reduced efficiency due to blocked or crowded condenser units. Leaves, grass clippings, weeds, and even overgrown landscaping can restrict airflow, making your system work harder than it needs to.

Take a few minutes this month to inspect the area around your outdoor unit. Clear away any debris and trim back bushes or plants to allow at least two feet of open space on all sides. Also, check that nothing is sitting on top of the unit—this can trap heat and reduce performance.

Good airflow helps your system cool your home more efficiently, prevents unnecessary wear and tear, and can even lower your energy bills. It's a simple step that goes a long way toward keeping your home cool and your system running smoothly all summer long.
